

Section Intro - Realm Rush

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Gary Pettie

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Introduction - Realm Rush

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Gary Pettie

Realm Rush

A 3D isometric tower defense style game that showcases object instantiation and management, as well as AI pathfinding, namely Breadth First Search (BFS).

This is the fifth section of the Complete Unity Developer 2.0 course.

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
Vector3 screenPos = new Vector3()  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Realm Rush Game Design

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Gary Pettie

Research

- What is a “Tower Defense” game?
- Place defensive structures
- Defend an objective
- Waves of enemies

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Research

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
SaveTheWorld();
```

```
mbu  
tp  
for  
3()
```

Requirements

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
string CLIMB_BOOL = "climb";  
string JUMP_TRIGGER = "jump";  
string LADDER_TAG = "ladder";
```

```
atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
MoveHorizontally();  
ClimbLadders();  
ProcessJump();  
SaveTheWorld();
```

Realm Rush Game Design

Player Experience:

Tactical / Strategic

Core Mechanic:

Using limited resources, strategically place towers to stop enemies from reaching their goal

Core game loop:

Survive against waves of enemies for as long as possible!

Level reloads when the player runs out of gold

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Game Theme

Story:

Defend against an invading kingdom who have come to pillage your castle!

Art:

Medieval Fantasy

Voxel Art

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TRIGGER = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Tech Setup

- Platform: PC / Mac / Linux
- Aspect Ratio: 1920x1080 16:9
- Input: Mouse

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Game Screen

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
OL = "Climb"  
GGER = "Jump"  
AG = "Ladder"
```

```
ew Vector3()  
Renderer;
```

```
saveNewWorld();
```

Stretch Goals

Enemy Pathfinding

Enemies will dynamically change their path

Build Timer

Towers will take n-seconds to build

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Tell us about your game!

- Decide on a central theme
- Choose a name
- Share with the community!

```
[SerializeField] float runSpeed;  
[SerializeField] float jumpSpeed;  
[SerializeField] float climbSpeed;
```

```
const string CLIMB_BOOL = "Climb";  
const string JUMP_TRIGGER = "Jump";  
const string LADDER_TAG = "Ladder";
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(0, 0, 0);  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    // Move horizontally  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheGame();  
}
```

Grid Snapping

Gary Pettie

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Text Labels

Gary Pettie

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Setup Your Coordinate Labels

- Import the TextMesh Pro Asset
- Align it to the top of your tile
- -99, -99 should fit on the top
- Create a prefab of your tile

```
[SerializeField] float runSpeed;  
[SerializeField] float jumpSpeed;  
[SerializeField] float climbSpeed;
```

```
const string CLIMB_BOOL = "Climb";  
const string JUMP_TRIGGER = "Jump";  
const string LADDER_TAG = "Ladder";
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(0, 0, 0);  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheGame();  
}
```

Coordinate System

Gary Pettie

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Lists

Gary Pettie

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Lists vs Arrays in C#

	Array	List
Collection Size	Fixed	Variable
Performance	Fast	Varies
Ease of Use	Easy	Easy
Flexibility	Low	High

“If in doubt, whip a list out”

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
LADDER_TAG = "Ladder"
```

```
bool onLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Get Your Enemy Patrolling

- Get your enemy moving along your path!

```
[SerializeField] float runSpeed  
[SerializeField] float jumpSpeed  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(  
SpriteRenderer.spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheGame();  
}
```

Introducing Coroutines

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Gary Pettie

Get Your Enemy Patrolling

- Get your enemy moving along your path!

```
[SerializeField] float runSpeed;  
[SerializeField] float jumpSpeed;  
[SerializeField] float climbSpeed;
```

```
const string CLIMB_BOOL = "Climb";  
const string JUMP_TRIGGER = "Jump";  
const string LADDER_TAG = "Ladder";
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(0, 0, 0);  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheGame();  
}
```

Importing Assets

Gary Pettie

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Prefab Variants

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

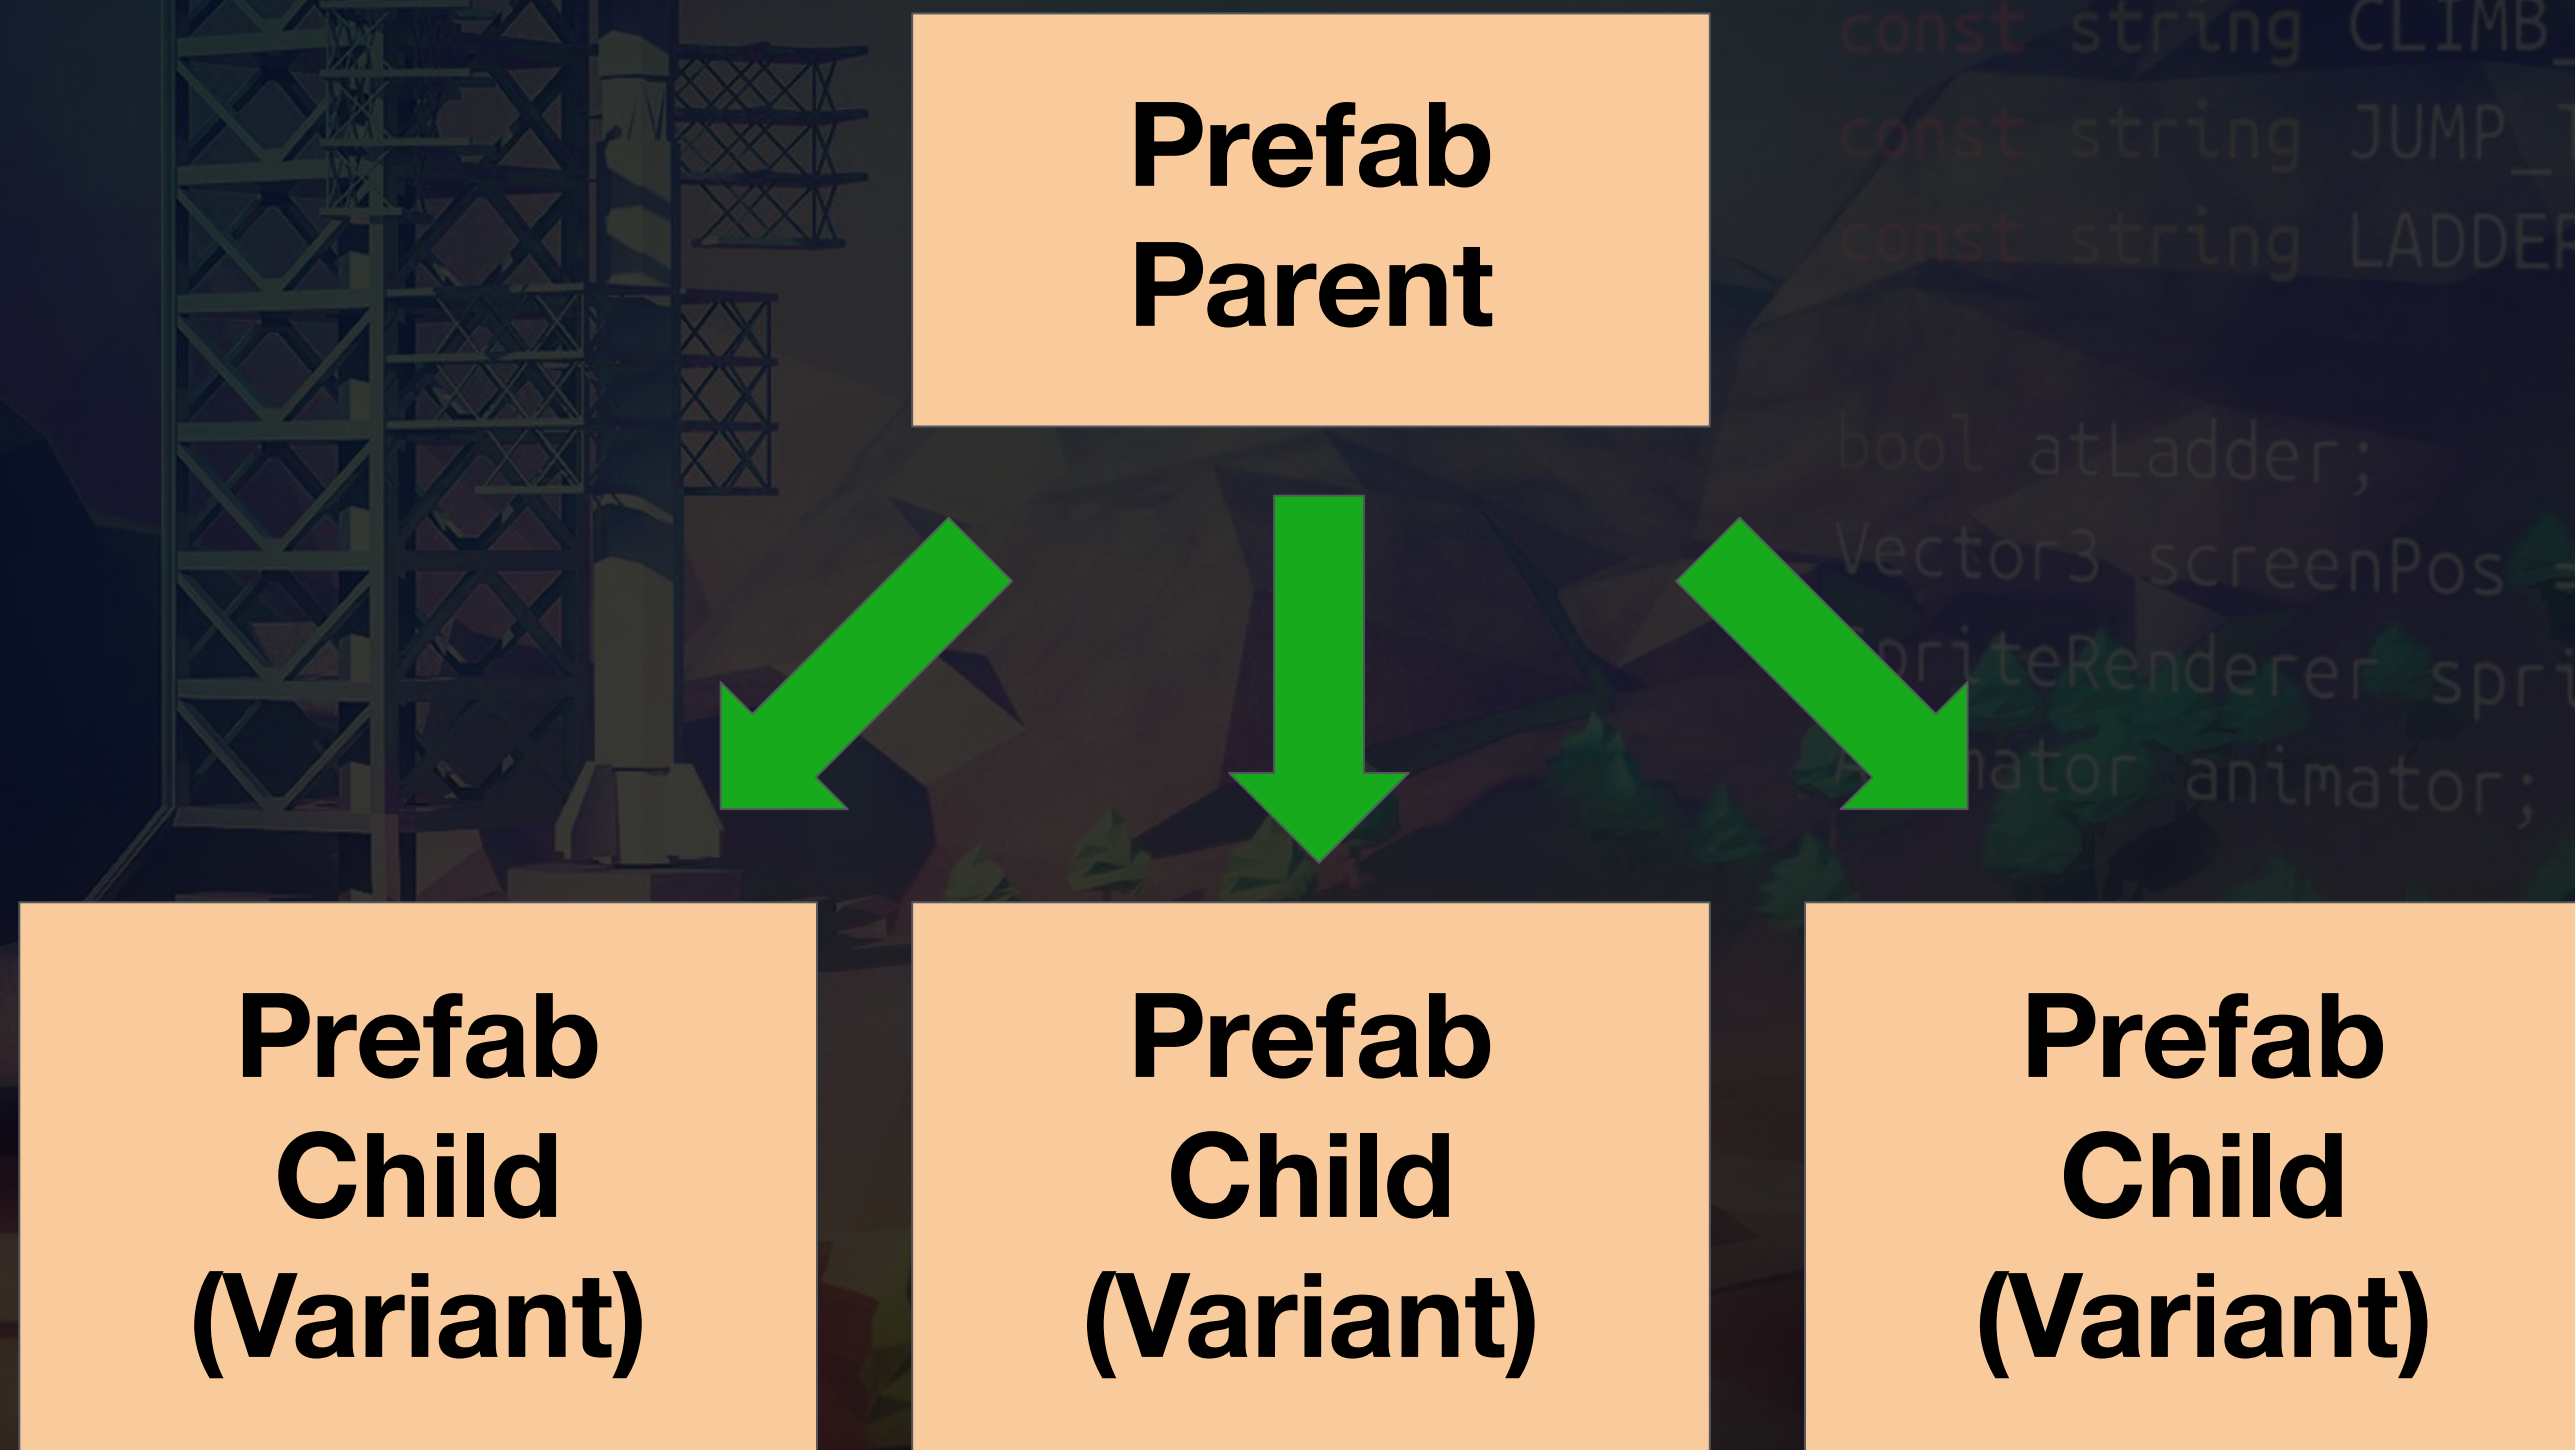

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Gary Pettie

Prefab Hierarchy

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
);  
SaveTheWorld();  
}
```

Create a prefab variant

- Create a prefab variant of our Tile Prefab
- Assign a new mesh to make it a corner piece
- Name the prefab variant Tile_RoadCorner

Hint:

The corner piece
should be this mesh

Prefab variant of a prefab variant

- Create 3 new prefab variants from our “Tile_RoadCorner” prefab variant
- Rotate the meshes by 90, 180, and 270
- Name the prefab variants:
 - “Tile_RoadCorner90”
 - “Tile_RoadCorner180”
 - “Tile_RoadCorner270”

Smooth Enemy Movement

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Gary Pettie

LERP (Linear Interpolation)

`Vector3.LERP(startPosition, endPosition, travelPercent)`

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    if (Input.GetKeyDown(KeyCode.Space))  
    {  
        if (atLadder)  
        {  
            MoveHorizontally();  
            ClimbLadders();  
            ProcessJump();  
            SaveTheWorld();  
        }  
    }  
}
```

```
MoveHorizontally();  
ClimbLadders();  
ProcessJump();  
SaveTheWorld();
```

Get your enemy moving

- Move the enemy smoothly between waypoints
- Make the enemy face the direction of travel
- Give the designer control over the enemy speed

```
[SerializeField] float runSpeed  
[SerializeField] float jumpSpeed  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool isOnLadder;  
Vector3 screenPos = new Vector3(0, 0, 0);  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheGame();  
}
```

Detect Mouse Input

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Gary Pettie

Detect Mouse Clicks

- Print the transform.name when the tile is clicked

```
[SerializeField] float runSpeed;  
[SerializeField] float jumpSpeed;  
[SerializeField] float climbSpeed;
```

```
const string CLIMB_BOOL = "Climb";  
const string JUMP_TRIGGER = "Jump";  
const string LADDER_TAG = "Ladder";
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(0, 0, 0);  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheGame();  
}
```

Targeting Enemies

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Gary Pettie

Instantiate your towers

- Towers should appear on the clicked tile

```
[SerializeField] float runSpeed;  
[SerializeField] float jumpSpeed;  
[SerializeField] float climbSpeed;
```

```
const string CLIMB_BOOL = "Climb";  
const string JUMP_TRIGGER = "Jump";  
const string LADDER_TAG = "Ladder";
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(  
    SpriteRenderer.spriteRenderer;  
    Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheGame();
```

Target the Enemy

- Set the enemy in Start()

Hint: Find a script that is unique to the enemy

- Make the weapon look at the target

```
[SerializeField] float runSpeed  
[SerializeField] float jumpSpeed  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(0, 0, 0);  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheGame();  
}
```

Damaging Enemies

Gary Pettie

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Set Up the Particle System

- Fire one bolt at a time
- The bolt should face the direction of travel

```
[SerializeField] float runSpeed;  
[SerializeField] float jumpSpeed;  
[SerializeField] float climbSpeed;
```

```
const string CLIMB_BOOL = "Climb";  
const string JUMP_TRIGGER = "Jump";  
const string LADDER_TAG = "Ladder";
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(0, 0, 0);  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheGame();  
}
```

Register Enemy Damage

- Create the EnemyHealth script using your knowledge from Argon Assault
- Set currentHitPoints to maxHitPoints in Start()
- Register Particle Collisions
- Reduce currentHitPoints when a collision occurs

Debugging Tools

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Gary Pettie

Change the Label Color

- Change the color of the label based on the value of IsPlaceable in the Waypoint script

```
[SerializeField] float runSpeed;  
[SerializeField] float jumpSpeed;  
[SerializeField] float climbSpeed;
```

```
const string CLIMB_BOOL = "Climb";  
const string JUMP_TRIGGER = "Jump";  
const string LADDER_TAG = "Ladder";
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(0, 0, 0);  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    // Move horizontally  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheGame();  
}
```

Find the Path

Gary Pettie

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Instantiating Enemies

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Gary Pettie

Object Pools

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Gary Pettie

Target Closest Enemy

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Gary Pettie

Find Closest Target

1. Find every target in the scene
2. Compare distances to see which is closest

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Range

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
string CLIMB_BOOL = "Climb"  
string JUMP_TRIGGER = "Jump"  
string LADDER_TAG = "Ladder"
```

```
ler;  
eenPos = new Vector3();  
rer.spriteRenderer;  
imator;
```

```
ite()
```

```
Horizontally();  
climbLadders();  
ProcessJump();  
SaveTheWorld();
```

Control the Particle System

- Write the Attack() method
 - Control the active state of the emissionModule with the isActive parameter
- Call Attack() from AimWeapon()
 - Attack(true) when target is in range
 - Attack(false) when the target is out of range

Damaging Enemies

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Gary Pettie

Create Infinite Enemies!

- Instantiate an enemy every 1 second using a coroutine

Hint:

Try using a 'while' loop

```
[SerializeField] float runSpeed  
[SerializeField] float jumpSpeed  
[SerializeField] float climbSpeed  
  
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"  
  
bool atLadder;  
Vector3 screenPos = new Vector3(0, 0, 0);  
SpriteRenderer spriteRenderer;  
Animator animator;  
  
void Update ()  
{  
    // Move horizontally  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheGame();  
}
```

Object Pools

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Gary Pettie

Enable Objects in the Pool

- Loop through each element in our 'pool' array
- Check if the object is Active In the Hierarchy
- If it is not:
 - Set it to be Active
 - return from the method early

```
[SerializeField] float runSpeed  
[SerializeField] float jumpSpeed  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(  
SpriteRenderer.spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheGame();  
}
```

Currency System (Part 1)

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Gary Pettie

Bank of the Realm

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update()
```

```
);
```

```
climbLadders();
```

```
ProcessJump();
```

```
SaveTheWorld();
```

Withdrawals

- Write the Withdraw() method

Hint:

Use the Deposit(int amount) method as a template

```
[SerializeField] float runSpeed;  
[SerializeField] float jumpSpeed;  
[SerializeField] float climbSpeed;
```

```
const string CLIMB_BOOL = "Climb";  
const string JUMP_TRIGGER = "Jump";  
const string LADDER_TAG = "Ladder";
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(0, 0, 0);  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    // Move horizontally  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheGame();  
}
```

Pass it on!

EnemyHealth

Enemy

Bank

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
Update()  
{  
    MoveHoriz  
    ClimbLa  
    ProcessJump();  
    SaveTheWorld();  
}
```

Thief!

- Amend the EnemyMover class, so that the enemy will steal gold from the bank

```
[SerializeField] float runSpeed;  
[SerializeField] float jumpSpeed;  
[SerializeField] float climbSpeed;
```

```
const string CLIMB_BOOL = "Climb";  
const string JUMP_TRIGGER = "Jump";  
const string LADDER_TAG = "Ladder";
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(0, 0, 0);  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheGold();  
}
```

Currency System (Part 2)

Gary Pettie

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

UI Text

Gary Pettie

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Increasing Difficulty

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Gary Pettie

Refactoring

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Gary Pettie

Limit the Pool Size

- Restrict poolSize to a range between 0 and 50

```
[SerializeField] float runSpeed;  
[SerializeField] float jumpSpeed;  
[SerializeField] float climbSpeed;
```

```
const string CLIMB_POOL = "Climb";  
const string JUMP_TRIGGER = "Jump";  
const string LADDER_TAG = "Ladder";
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(0, 0, 0);  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheGame();  
}
```

Require Component

- Make the CoordinateLabeler require TextMeshPro

```
[SerializeField] float runSpeed;  
[SerializeField] float jumpSpeed;  
[SerializeField] float climbSpeed;
```

```
const string CLIMB_BOOL = "Climb";  
const string JUMP_TRIGGER = "Jump";  
const string LADDER_TAG = "Ladder";
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(0, 0, 0);  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheGame();  
}
```

Playtest and Balance

Gary Pettie

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Solo Challenge

- Playtest your game
 - Create an interesting level
 - Use prefab variants to add more tiles
 - Add trees to block tower damage
- Balance everything!
 - Tower range, shooting speed
 - Enemy speed, hitpoints, damage ramp
 - Change the size of the object pool

```
[SerializeField] float runSpeed;
[SerializeField] float jumpSpeed;
[SerializeField] float climbSpeed;

const string CLIMB_BOOL = "Climb";
const string JUMP_TRIGGER = "Jump";
const string LADDER_TAG = "Ladder";

bool atLadder;
Vector3 screenPos = new Vector3(
SpriteRenderer spriteRenderer;
Animator animator;

void Update ()
{
    MoveHorizontally();
    ClimbLadders();
    ProcessJump();
    SaveTh...
```

WARNING!

- We're at the mid-point for this section
- In the next half, we will be changing our design (specifically enemy pathfinding)
- Spend as long as you like on this current prototype
But know that we will be changing some of the core elements in upcoming lectures.

Share and Playtest

- Build your game
- Share your game with the community
 - Ask them to playtest and give feedback
 - Give feedback on a game from a fellow student

```
[SerializeField] float runSpeed;  
[SerializeField] float jumpSpeed;  
[SerializeField] float climbSpeed;
```

```
const string CLIMB_BOOL = "Climb";  
const string JUMP_TRIGGER = "Jump";  
const string LADDER_TAG = "Ladder";
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(0, 0, 0);  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    // Move horizontally  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheGame();  
}
```

Review and Reflect

Gary Pettie

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Pathfinding Decisions

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Gary Pettie

Which Algorithm is Best?

Breadth First Search (BFS)

Dijkstra

A*

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed  
  
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"  
  
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;  
  
void Update ()  
{  
    // ...  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Search Algorithms Overview

Algorithm	Always Shortest Path	Movement Costs	Multiple Start or End Points	Speed
Breadth First Search	✓	✗	✓	Medium
Dijkstra	✓	✓	✓	Slow
A*	?	✓	✗	Fast

Search Algorithms Overview

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
ring CLIMB_BOOL = "Climb"  
ring JUMP_TRIGGER = "Jump"  
ring LADDER_TAG = "Ladder"
```

```
adder;

```

```
}
```

Breadth First Search

1. Choose your search direction
2. Add the current node to the tree
3. Add the neighbours of the current node to the tree
4. Move to the next node in the tree
5. If you're not at the goal, go to step 3
6. Record your journey back up the tree
7. Reverse the list to get the path in the correct order

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```

{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Gary Pettie

What are dictionaries?

- Stores a key-value pair
- **Keys** link to **values**
- The **keys** must be unique, and are usually very simple
- The **values** can be more complex types
- **Values** can be null
- **Keys** cannot be null
- The lookup is very fast from key to value
- The lookup is much slower from value to key.

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
Vector3 screenPos = new Vector3()  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

More Debugging Tools

Gary Pettie

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

FINAL WARNING!

- Back up your project and work on a copy
- We will be breaking existing scripts to make them work with our new Node and GridManager

Finish SetLabelColor()

- We have three colors we yet to use:
 - pathColor
 - exploredColor
 - defaultColor
- Think about the best order for these to be checked

Exploring Neighbors

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Gary Pettie

Explore Neighbors

- Create an empty list called “neighbors”
- Loop through all for directions
- Calculate the coordinates of the node in that direction from our currentSearchNode
- Check if the neighbor’s coordinates exist in the grid
- If it does exist in the grid, add it to our neighbors list

Exploring the World

Gary Pettie

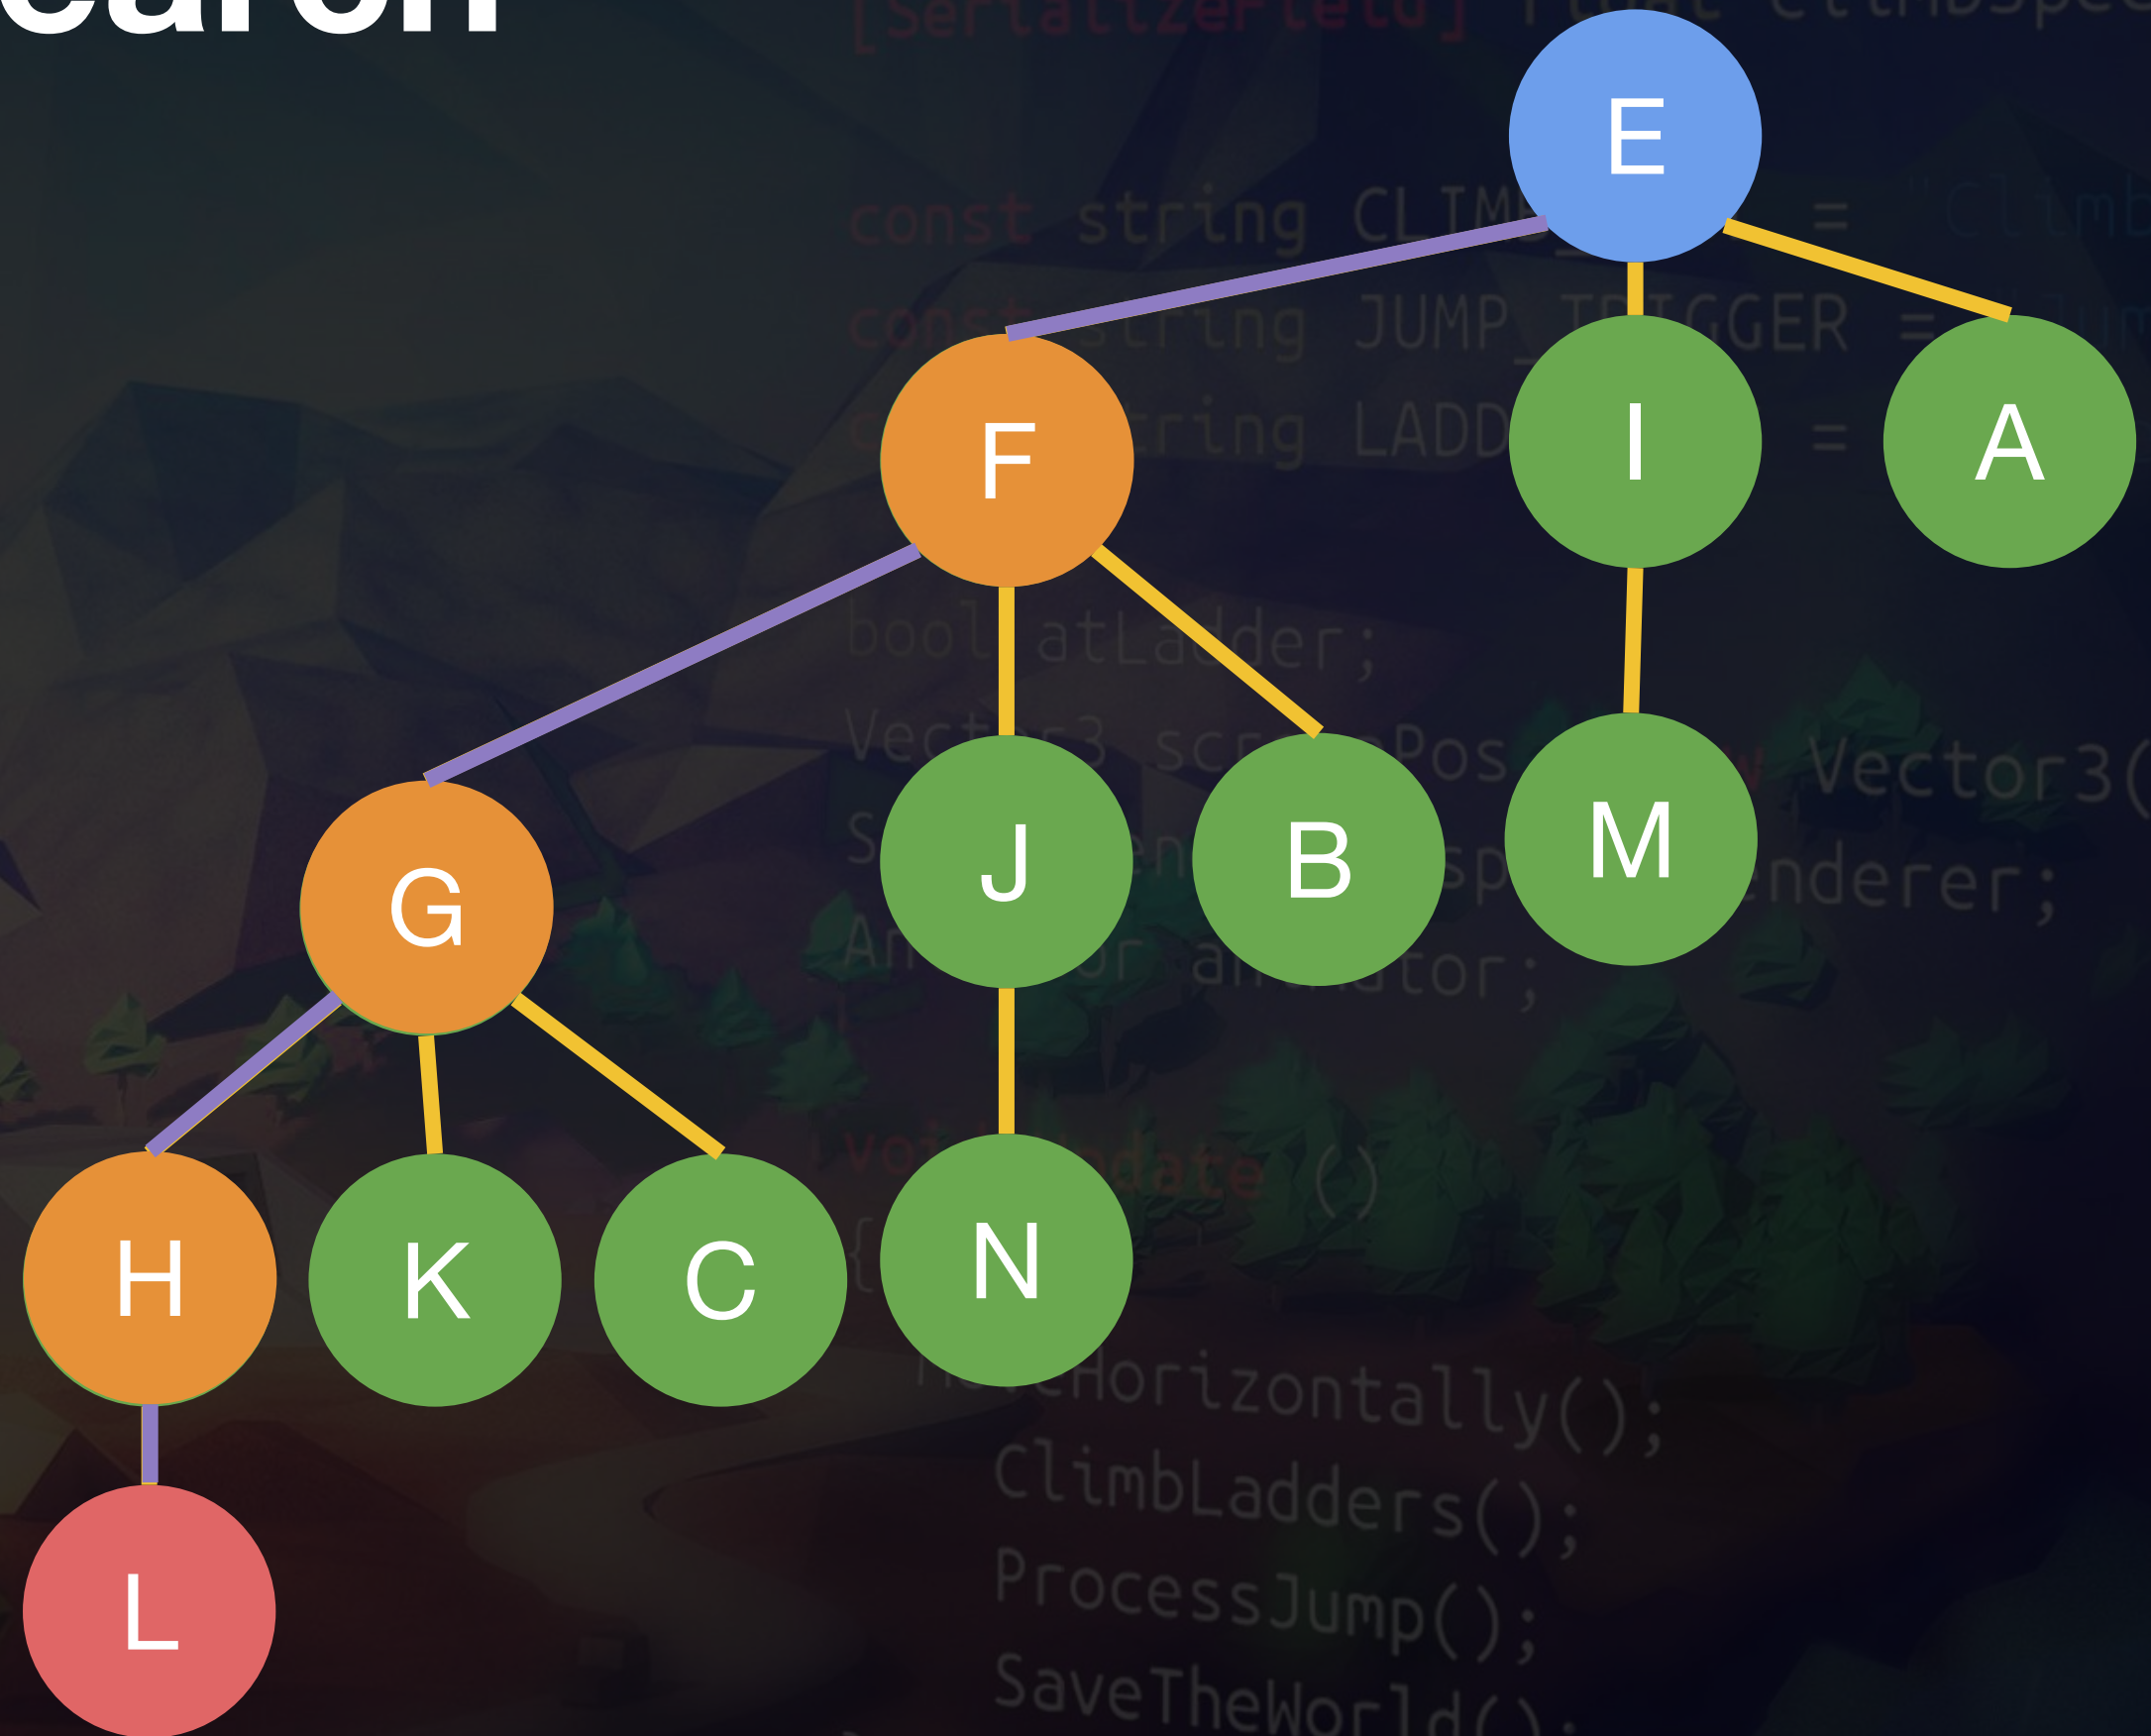

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Breadth First Search

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_TRIGGER = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADD_TRIGGER = "Ladder"
```

```
bool atLadder;
```

```
Vector3 screenPos;
```

```
SpriteRenderer sp; Vector3();
```

```
Animator animator;
```

```
void Update ()
```

```
{
```

```
animator.Horizontally();
```

```
ClimbLadders();
```

```
ProcessJump();
```

```
SaveTheWorld();
```

```
}
```

Queues

- A special kind of list
- Enforces a FIFO order

- `Queue<Node> queue`
- `queue.Enqueue()` adds to end of queue
- `queue.Dequeue()` returns the front of the queue
- `queue.Peek()` look but don't touch

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3()  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update()
```

```
MoveHorizontally()  
ClimbLadders();  
ProcessJump();  
SaveTheWorld();
```

Stop Immediately If Start Is End

- Set the start and end waypoint the same
- The algorithm should stop immediately
- Report that you've stopped to the console.

Finding the Path (again!)

Gary Pettie

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Crawling the Map

M	N	O	P
I	J	K	L
E	F	G	H
A	B	C	D

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()
```

```
MoveHorizontally();  
ClimbLadders();  
ProcessJump();  
SaveTheWorld();
```

Flow Field

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_TRIGGER = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADD_TRIGGER = "Ladder"
```

```
bool atLadder;
```

```
Vector3 screenPos;
```

```
SpriteRenderer sp; Vector3();
```

```
Animator animator;
```

```
void Update ()
```

```
{
```

```
    animator.Horizontally();
```

```
    ClimbLadders();
```

```
    ProcessJump();
```

```
    SaveTheWorld();
```

```
}
```

Build Path

```
//while (currentNode.connectedTo != null)  
//set currentNode to currentNode.connectedTo  
//add currentNode to path
```

```
[SerializeField] float runSpeed  
[SerializeField] float jumpSpeed  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
MoveHorizontally();  
ClimbLadders();  
ProcessJump();  
SaveTheGame();  
}
```

Blocking Nodes

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Gary Pettie

GetPositionFromCoordinates()

Hint:

- It has a similar structure to GetCoordinatesFromPosition()
- You'll need to do some algebra to rearrange things in terms of the position instead of the coordinates

Valid Path

Gary Pettie

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Script Execution Order

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Gary Pettie

Challenge

- Set the endPosition to be the position of the next node in the path

Hint:

- We used similar code in ReturnToStart()

Broadcast Messages

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Gary Pettie

BroadcastMessage("Dinner")

Parent

Children

Broadcast Messages

- Get your Pathfinder broadcasting a message to the EnemyMover
- The enemy should dynamically alter its path when a tower is placed

```
[SerializeField] float runSpeed;  
[SerializeField] float jumpSpeed;  
[SerializeField] float climbSpeed;
```

```
const string CLIMB_ROOT = "Climb";  
const string JUMP_TRIGGER = "Jump";  
const string LADDER_TRIGGER = "Ladder";
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(0, 0, 0);  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheGame();  
}
```

Overloading Methods

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Gary Pettie

Overloaded Methods

- A type of polymorphism
- 'poly' = many
- 'morphism' = shapes
- Methods can have the same name if they have different signatures

e.g.

`Instantiate(object)`

`Instantiate(object, position, rotation)`

`etc.`

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 movement = new Vector3(0, 0, 0);  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Overload GetNewPath()

- Write a new version of GetNewPath() that takes the current coordinates as an argument
- GetNewPath() should pass startCoordinates to BreadthFirstSearch()
- The overloaded method should pass the provided coordinates

Build Timer

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Gary Pettie

Add a build delay

- Turn off all children and grandchildren in the hierarchy
- Enable the children and grandchildren sequentially
- Add a build delay to control how quickly they become active

```
[SerializeField] float runSpeed;  
[SerializeField] float jumpSpeed;  
[SerializeField] float climbSpeed;
```

```
const string CLIMB_BOOL = "Climb";  
const string JUMP_TRIGGER = "Jump";  
const string LADDER_TAG = "Ladder";
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(0, 0, 0);  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheGame();  
}
```

Ambience

Gary Pettie

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Challenge

- Add some additional lights to your game
- Add a few small particle effects to add interest to your level

```
[SerializeField] float runSpeed  
[SerializeField] float jumpSpeed  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTh...
```

Post Processing

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Gary Pettie

Post Processing

- In camera effects used to change the look of your game

Profile

Volume

Layer

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool a  
Vector  
Sprite  
Animator animator;
```

```
void Update()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Post Processing Stack

- Play around with all of the different effects
- Make your game look as good as possible
- Share screenshot with the community!

```
[SerializeField] float runSpeed;  
[SerializeField] float jumpSpeed;  
[SerializeField] float climbSpeed;
```

```
const string CLIMB_BOOL = "Climb";  
const string JUMP_TRIGGER = "Jump";  
const string LADDER_TAG = "Ladder";
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(0, 0, 0);  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheGame();  
}
```

Wrap Up - Realm Rush

Gary Pettie

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

OLD SLIDES

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()
```

```
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

Limitations Of Unity Pathfinding

```
bool atLadder;  
Vector3 greenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Convince Yourself Of Limit

- You should feel clear why we're starting from scratch.
- Feel free to discuss in forums, or on our Discord chat server.

Types Of Pathfinding

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

The Path Ahead

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

What to expect in the next 2 lectures

- Lots of refactoring
- Thinking about instance variables vs constants
- Try and zoom out and see the purpose
- Engage on the community.

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed =
```

```
const string CLIMB_BOOL = "Climb";  
const string JUMP_TRIGGER = "Jump";  
const string LADDER_TAG = "Ladder";
```

```
bool onLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

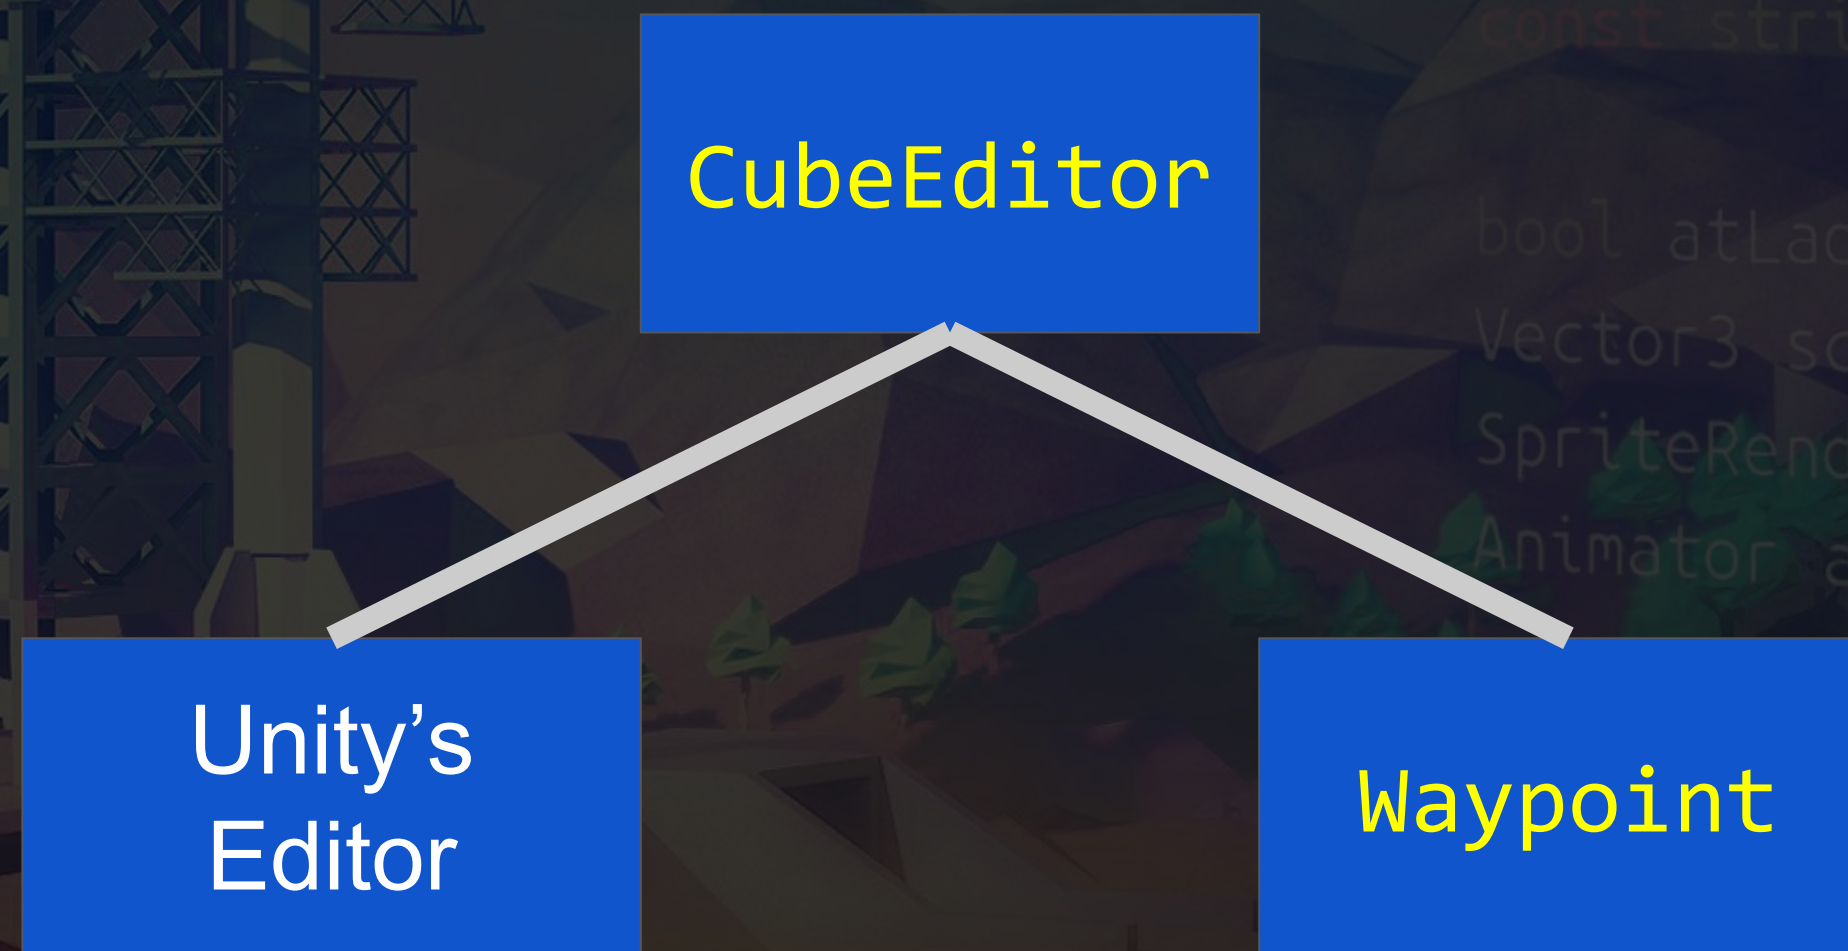

Instance Variables And Constants

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Dependencies

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
MoveHorizontally();  
ClimbLadders();  
ProcessJump();  
SaveTheWorld();
```

Re-wire Snapping & Labelling

- Snapping to grid in editor works
- The cube labelling works
- The game plays even with all Cube Editor scripts disabled.

```
[SerializeField] float runSpeed  
[SerializeField] float jumpSpeed  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"  
  
bool atLadder;  
Vector3 screenPos = new Vector3(0, 0, 0);  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    // Move horizontally  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheGame();  
}
```

How we're organising our data

- The **gridSize** should be in just one place
- Instance (member) variables aren't this one place
- Revisiting **const** from Terminal Hacker
- Being careful about what's dependant on what.

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

The Dictionary Data Structure

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

What are dictionaries?

- Think of them like the index of a book
- **Keys** (words) link to **values** (pages)
- The **keys** must be unique, and are usually simple
- The **values** can be more complex types
- The lookup is very fast from key to value
- The lookup is much slower from value to key.

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    Jump();  
    SaveTheWorld();  
}
```

Use dictionaries when...

- You have simple values that have meaning in their value, such as the position of a waypoint
- This meaningful value must be unique, for example one waypoint per grid position
- You want to associate this unique value with some other value, such as the block at that position.

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed  
  
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"  
  
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;  
  
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

Finding Game Objects By Name

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Color Start & End

- Specify start and end waypoint in Inspector
- Color them differently.

```
[SerializeField] float runSpeed;  
[SerializeField] float jumpSpeed;  
[SerializeField] float climbSpeed;
```

```
const string CLIMB_BOOL = "Climb";  
const string JUMP_TRIGGER = "Jump";  
const string LADDER_TAG = "Ladder";
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(0, 0, 0);  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheGame();  
}
```

Print exploration log

- Console should read “Exploring X,Y” for each neighbour
- Don't worry if there's a waypoint there or not
- Explored coordinates should change if you change the start block.

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

Breadth First Search Algorithm

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Breadth First Search Pseudocode

```
// en-queue the start waypoint  
// while the queue has items  
// if we find the goal stop  
// de-queue frontier waypoint  
// for each direction from frontier  
//   queue new unexplored waypoint  
// mark frontier as explored
```

What Order Would This Map Search?

A	B		
G	C	E	
H	D	F	I
L	M	K	Z

- What was the queue order?
- What is the shortest path?
- Assume directions are up, right, down, left in that order
- Assume starts at A, stops at Z
- Share your answers and reasons with the community.

Introducing C# Queues

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

FIFO vs LIFO

- FIFO = First In, First Out (e.g. dinner queue)
- LIFO = Last In, First Out (e.g. stack of plates)
- Queues in C# are FIFO
- `Queue<Waypoint> queue`
- `queue.Enqueue()` adds to end of queue
- `queue.Dequeue()` returns the front of the queue

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update()
```

```
MoveHorizontally();  
ClimbLadders();  
ProcessJump();  
SaveTheWorld();
```

Stop Immediately If Start Is End

- Set the start and end waypoint the same
- The algorithm should stop immediately
- Report that you've stopped to the console.

Running Manual Tests

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

A Note About **public**

- If a class just stores data (e.g. the **Waypoint**) then I find it ok to make state (e.g. **isExplored**) public
- This saves writing trivial methods like **SetExplored()** and **GetExplored()**

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Verify The Pathfinding Operation

- Verify the operation of our pathfinder for yourself.

```
[SerializeField] float runSpeed  
[SerializeField] float jumpSpeed  
[SerializeField] float climbSpeed  
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(  
SpriteRenderer.spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
MoveHorizontally();  
ClimbLadders();  
ProcessJump();  
SaveTheGame();
```

A Breadcrumb Trail

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

When it's OK to use public

- When you would simple write **SetX()** and **GetX()** anyway, you may as well just make x public!

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Optional Challenge

- Make the Waypoint update its own color.

```
[SerializeField] float runSpeed;  
[SerializeField] float jumpSpeed;  
[SerializeField] float climbSpeed;
```

```
const string CLIMB_BOOL = "Climb";  
const string JUMP_TRIGGER = "Jump";  
const string LADDER_TAG = "Ladder";
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(0, 0, 0);  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheGame();  
}
```

Reversing A List

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

How To Calculate Path

1. Start at the end waypoint
2. Add it to a list
3. Add all intermediate waypoints in a loop
4. Add the start waypoint
5. Reverse the list.

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Finish the Create Path Method

- The list in the inspector should be correct
- Use `path.Reverse()` to reverse order
- Try it on a few different maps
- Celebrate pathfinding!

```
[SerializeField] float runSpeed;
[SerializeField] float jumpSpeed;
[SerializeField] float climbSpeed;

const string CLIMB_BOOL = "Climb";
const string JUMP_TRIGGER = "Jump";
const string LADDER_TAG = "Ladder";

bool atLadder;
Vector3 screenPos = new Vector3(
SpriteRenderer spriteRenderer;
Animator animator;

void Update ()
{
    MoveHorizontally();
    ClimbLadders();
    ProcessJump();
    SaveTh...
```

Adding Production Assets

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Add Assets To Your Scene

- Update your path blocks.
- Add the friendly and enemy structures.
- Replace the enemy.
- Don't do the tower just yet.

```
[SerializeField] float runSpeed;
[SerializeField] float jumpSpeed;
[SerializeField] float climbSpeed;

const string CLIMB_BOOL = "Climb";
const string JUMP_TRIGGER = "Jump";
const string LADDER_TAG = "Ladder";

bool atLadder;
Vector3 screenPos = new Vector3(
SpriteRenderer spriteRenderer;
Animator animator;

void Update ()
{
    MoveHorizontally();
    ClimbLadders();
    ProcessJump();
    SaveTheGame();
}
```

Tower LookAt Enemy

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Tower LookAt Enemy

- Write the method for the tower to look at the enemy.
- `who.LookAt(what)`

```
[SerializeField] float runSpeed;  
[SerializeField] float jumpSpeed;  
[SerializeField] float climbSpeed;
```

```
const string CLIMB_BOOL = "Climb";  
const string JUMP_TRIGGER = "Jump";  
const string LADDER_TAG = "Ladder";
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(0, 0, 0);  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheGame();  
}
```

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

MagicaVoxel Bonus Content

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

MagicaVoxel Community Course

1. Course content for our community.
2. Outside of this course because some people aren't interested in asset creation.
3. We received a very positive response on our Facebook post.

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed =  
  
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"  
  
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;  
  
void Update()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Another Solo Challenge

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Main Feature Buckets

1. Shoot & damage enemies
2. Place towers
3. Spawn enemies
4. Damage base

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Considerations For Shooting

1. Create particle system for bullets
2. Collision on particles and on enemies
3. Start and stop shooting based upon enemy distance
4. Do damage to enemy
5. Visualise damage

Solo Challenge

- Using Argon Assault as reference, implement:
 - Towers shoot projectiles
 - Projectiles collide with enemy
 - Damage effect is triggered
 - Enemies lose hit points
 - Enemies die

```
[SerializeField] float runSpeed  
[SerializeField] float jumpSpeed  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb";  
const string JUMP_TRIGGER = "Jump";  
const string LADDER_TAG = "Ladder";
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(0, 0, 0);  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheGame();  
}
```

Make Tower Shoot

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

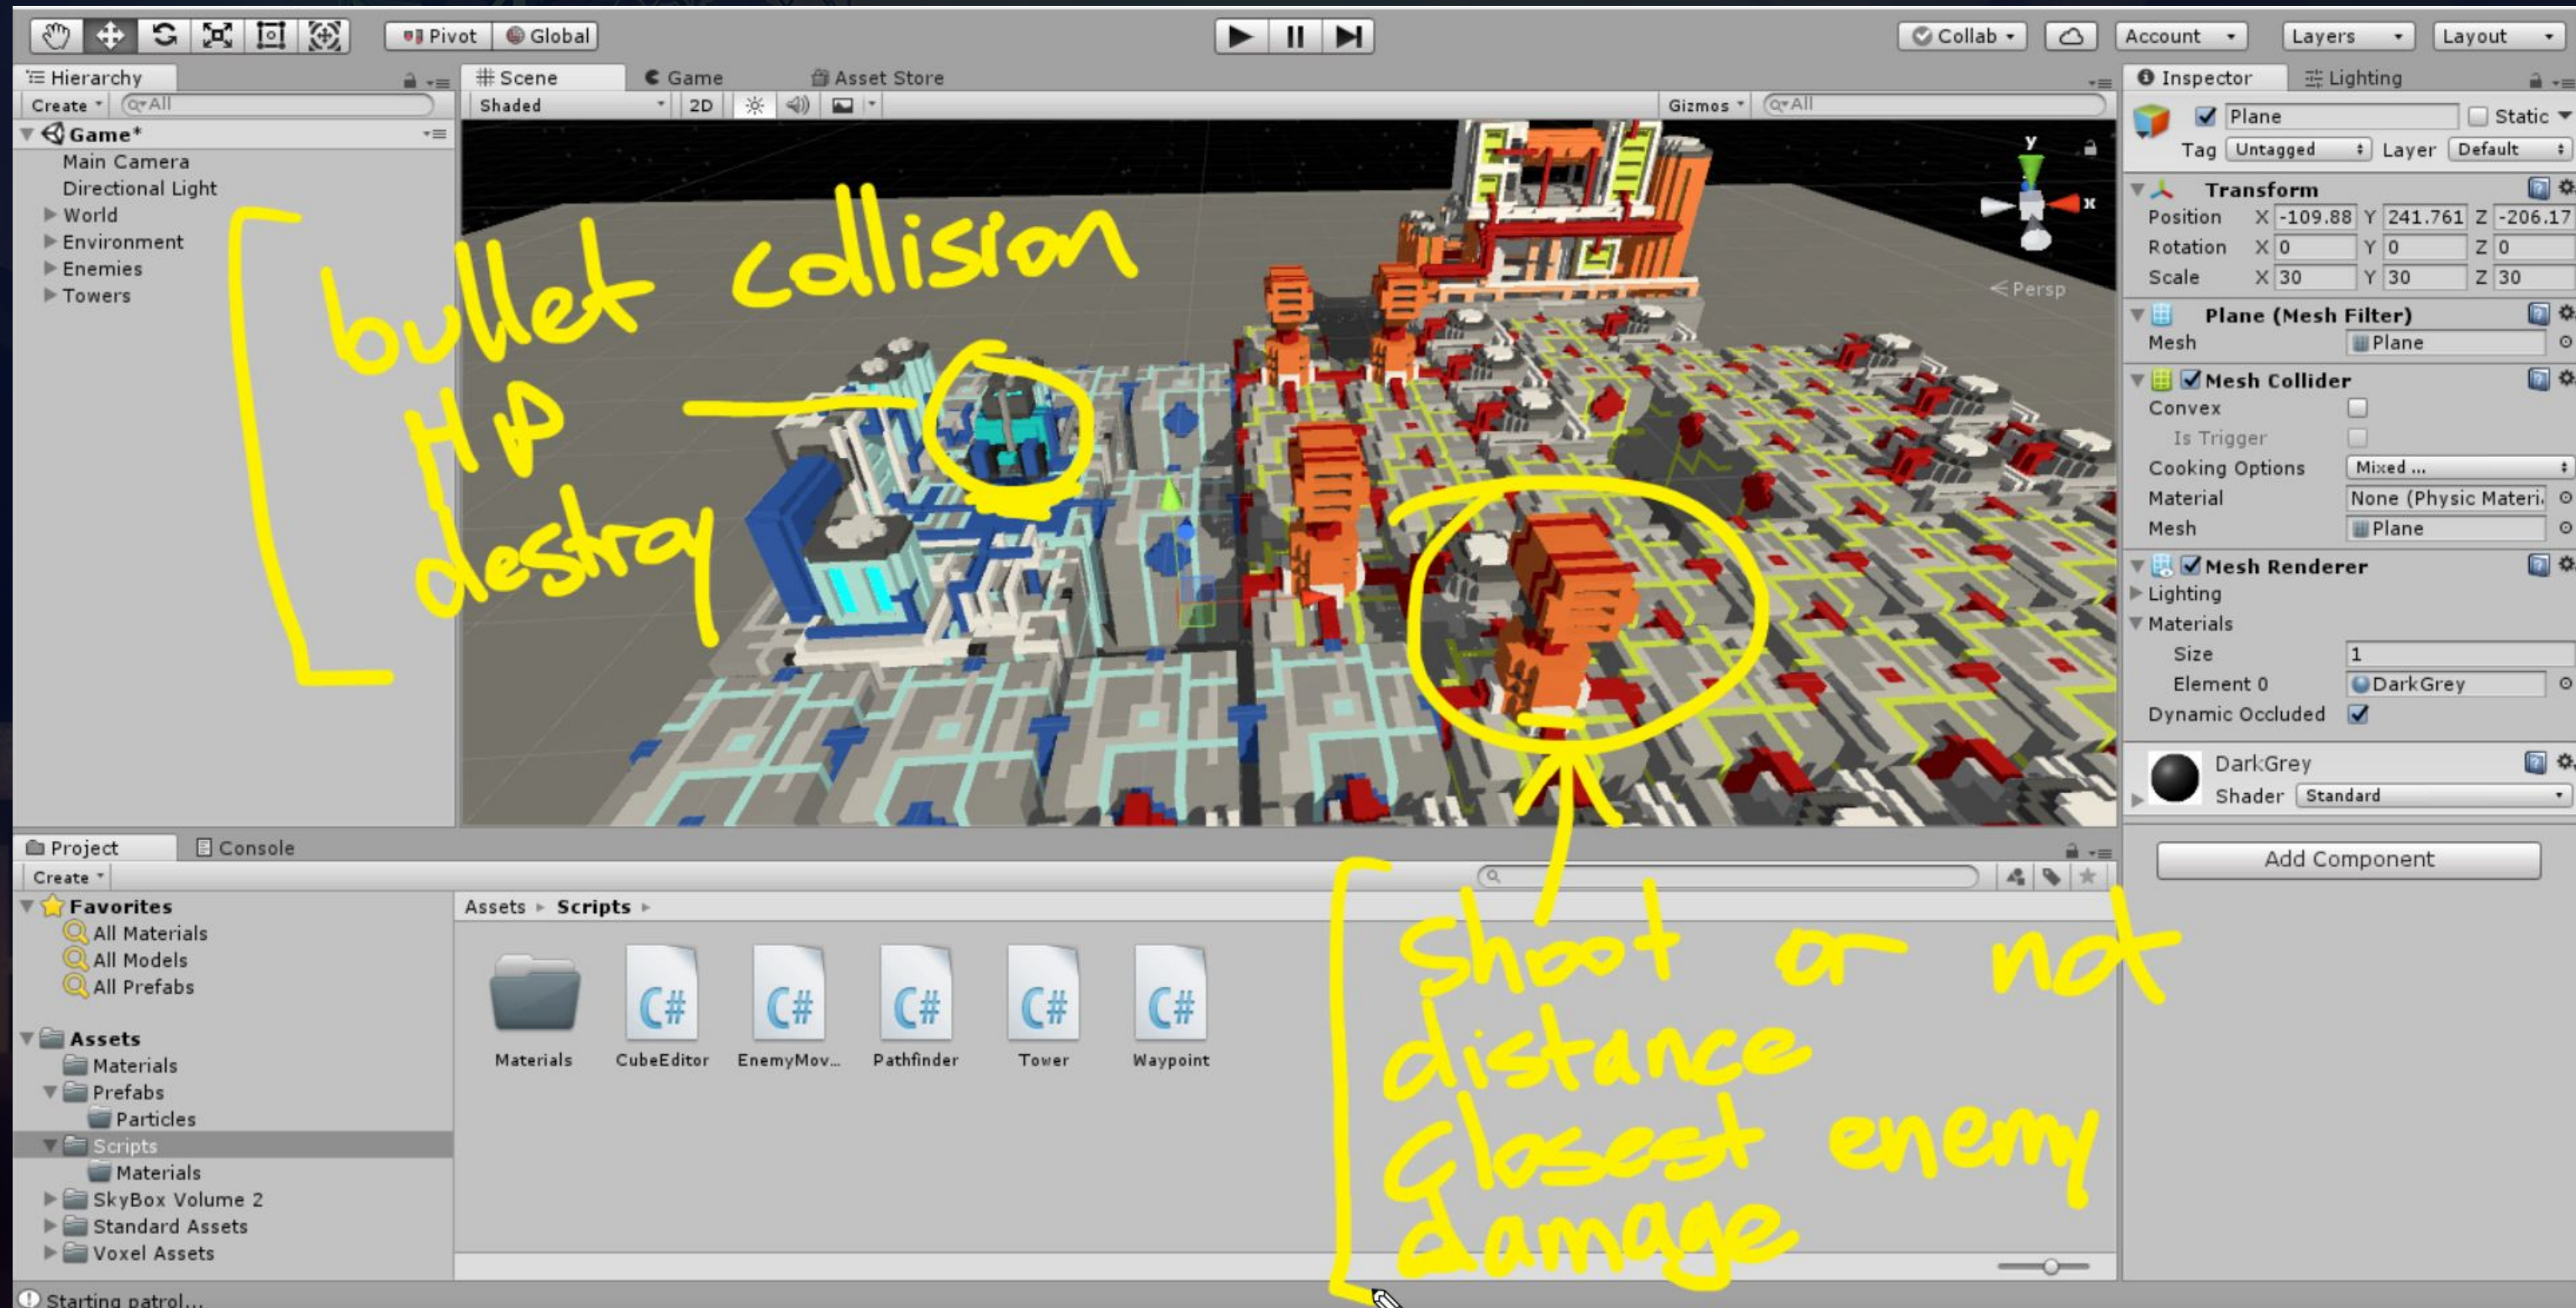

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Content Of Scripts

Enemy HitPoints

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Kill Enemy

- If the enemy's hitpoints are less than 1, destroy the enemy.

```
[SerializeField] float runSpeed  
[SerializeField] float jumpSpeed  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(  
SpriteRenderer.spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTh...
```

Check For Distance

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Shoot If Enemy Is Close

- Follow our logic and shoot if enemies are less than X distance away.

`Vector3.Distance(enemy, tower);`

Logic For Shooting

1. Define attack range
2. Check that an enemy exists
3. Check for distance from tower to enemy
4. If distance is less than attack range, fire at enemy
5. Towers shoot bullets by turning on bullet particle system

Vector3.Distance(enemy, tower);

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 position = new Vector3();  
Animator animator;
```

```
void Update()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Subtleties Of Spawning

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

**“There are two hard things in computer science:
cache invalidation, naming things, and off-by-one
errors.”**

Jeff Atwood

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Store The Path

- If **GetPath()** is called a 2nd time, you should return the path you've already calculated, and not attempt to calculate it again.
- If this is done right, the console errors will go away.

```
[SerializeField] float runSpeed;  
[SerializeField] float jumpSpeed;  
[SerializeField] float climbSpeed;
```

```
const string CLIMB_BOOL = "Climb";  
const string JUMP_TRIGGER = "Jump";  
const string LADDER_TAG = "Ladder";
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(  
    SpriteRenderer.spriteRenderer;
```

```
Animator animator;
```

```
void Update ()
```

```
{
```

```
    MoveHorizontally();
```

```
    ClimbLadders();
```

```
    ProcessJump();
```

```
    SaveThePath();
```

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

Revise Coroutines & Much More

```
bool atLadder;  
Vector3 chosenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Revise Coroutines

- Create **EnemySpawner.cs** and expose **float secondsBetweenSpawns**
- Attach to the Enemies parent gameobject
- Connect to the Enemy prefab in the inspector
- Revise coroutines by spawning enemies!

Target Closest Enemy

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

A recipe for superlatives

// Get the collection of things

// Assume the first is the “winner”

// For each item in collection

// Update winner

// Return the winner

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Write **GetClosest()**

- The method should return the closest transform of the two supplied
- The distance should be to the transform of the gameobject the script is attached to.

```
[SerializeField] float runSpeed  
[SerializeField] float jumpSpeed  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
Vector3 screenPos = new Vector3(  
    spriteRenderer.spriteRenderer;  
    Animator animator;
```

```
void Update()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheGame();
```

Conditional Instantiation

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Pattern For Filtering Mouse Clicks

```
if (Input.GetMouseButtonDown(0)) // left click
{
    if (isPlaceable)
    {
        print(gameObject.name + " tower placement");
    }
    else
    {
        print("Can't place here");
    }
}
```

```
[SerializeField] float runSpeed =
[SerializeField] float jumpSpeed =
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb
const string JUMP_TRIGGER = "Jump
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;
Vector3 currentPos = new Vector3();
SpriteRenderer spriteRenderer;
Animator animator;
```

```
void Update ()
{
    MoveHorizontally();
    ClimbLadders();
    ProcessJump();
    SaveTheWorld();
}
```

Only Log If Placeable

- Simply also “filter” for the block being placeable.

```
[SerializeField] float runSpeed;  
[SerializeField] float jumpSpeed;  
[SerializeField] float climbSpeed;
```

```
const string CLIMB_POOL = "Climb";  
const string JUMP_TRIGGER = "Jump";  
const string LADDER_TAG = "Ladder";
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(0, 0, 0);  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheGame();  
}
```

Bloom's Taxonomy

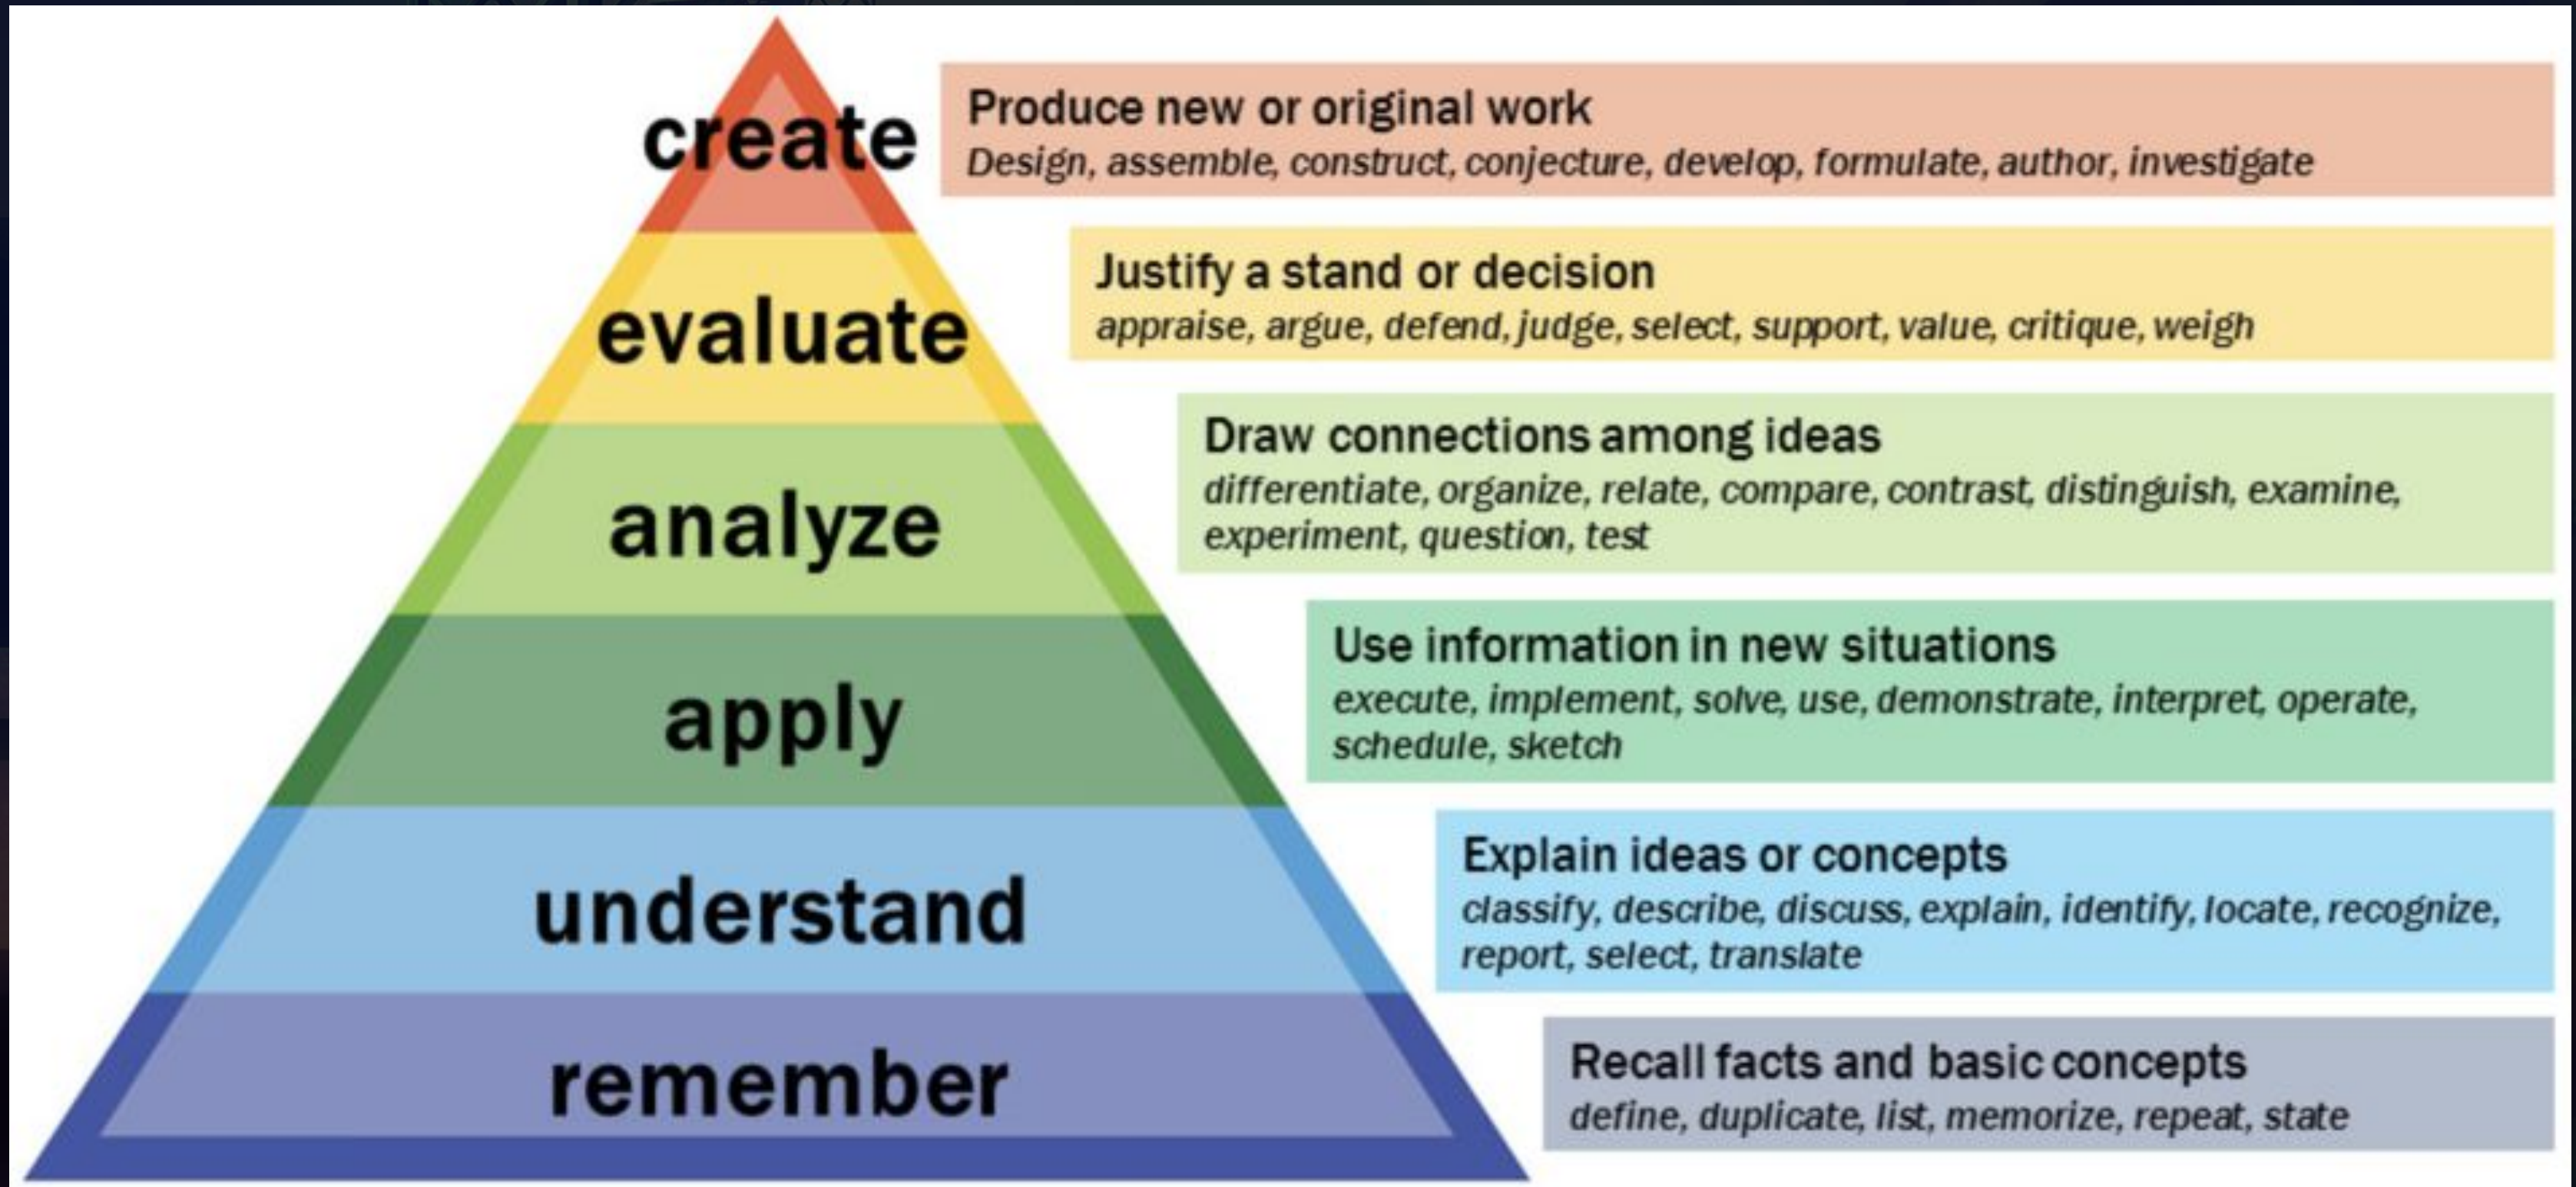

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Introducing Bloom's Taxonomy

An Integration Challenge

- Expose **towerPrefab** in Waypoint
- Towers should spawn if **isPlaceable**
- Prevent towers placing on towers
- Check the game plays properly.

Hint 0: Always connect prefabs to prefabs, not prefabs to instances.

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

Particles & Algorithm Improvements

```
bool atLadder;  
Vector3 movement = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Particle Collision Module Settings

Min Kill Speed	Particles travelling below this speed after a collision will be removed from the system.
Max Kill Speed	Particles travelling above this speed after a collision will be removed from the system.

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 greenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Play New Particle On Death

- When the player dies the death particle plays.

Hint 0: Expose in similar way to hit particle.

Hint 1: Instantiate the particle and keep a reference.

Hint 2: Play the particle after creating it.

Circular Or Ring Buffers

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

www.how

Another mnemonic for question asking...

What? Are we talking about?

Why? Do we care?

Who? Already knows?

How? Do I do it?

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Why Ring Buffers Rock

- Instantiating & destroying can be slow operation
- Destroying leaves a “hole” in memory
- Over time memory becomes fragmented
- Fragmented memory performs badly
- Basically it's recycling vs disposable
- You'll need to build your objects to last.

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_POOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    Jump();  
    SaveTheWorld();  
}
```

Explain Ring Buffers

- You should be able to explain a simple ring buffer to a friend, family member, or even a rubber chicken!

```
[SerializeField] float runSpeed;  
[SerializeField] float jumpSpeed;  
[SerializeField] float climbSpeed;
```

```
const string CLIMB_BOOL = "Climb";  
const string JUMP_TRIGGER = "Jump";  
const string LADDER_TAG = "Ladder";
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(0, 0, 0);  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheGame();  
}
```

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

Implementing A Ring Buffer

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

To-do List

- Create a Tower Factory class
- Move the tower prefab, and max towers there
- Note we'll tidy-instantiated objects later
- Wire-up our tower factory, at least in outline.

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3()  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Detect Tower Limit

- Console should log when you try and place too many towers, and not instantiate a new tower.

```
[SerializeField] float runSpeed;  
[SerializeField] float jumpSpeed;  
[SerializeField] float climbSpeed;
```

```
const string CLIMB_BOOL = "Climb";  
const string JUMP_TRIGGER = "Jump";  
const string LADDER_TAG = "Ladder";
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(  
    SpriteRenderer.spriteRenderer;  
    Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTower();
```

Revising C# Queues

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

A queue as the basis of a ring buffer

- Add to the top of the “stack of plates”
- When full, take one off the bottom
- Move this to the top

We'll also need to set the waypoint bases as “placeable”, and tell the moved tower what its new base is.

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed =
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Create a queue of towers

- Create an empty queue of towers for our use
- Add towers to the queue when you instantiate them
- Prove to yourself the queue is working
- Bonus: de-queue towers when you move them.

How To Destroy Particles

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Notes on destroying particles

- Typical case, a character dying
- You want to destroy character immediately
- This deletes references to the particle VFX
- ... and the whole script that's running
- Use Unity's **Destroy(object, delay);**

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed =  
  
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"  
  
bool atLadder;  
Vector3 movePos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;  
  
void Update()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Keep the hierarchy tidy

- Death effects destroy themselves
- Death effects are organized in hierarchy
- Towers are organised in hierarchy
- Enemies are organised in hierarchy.

```
[SerializeField] float runSpeed  
[SerializeField] float jumpSpeed  
[SerializeField] float climbSpeed  
  
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"  
  
bool atLadder;  
Vector3 screenPos = new Vector3(0, 0, 0);  
SpriteRenderer spriteRenderer;  
Animator animator;  
  
void Update()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheGame();  
}
```

Complete Game Loop

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

When Enemy Reaches Goal

- Destroy enemy
- Play enemy death particles
- Destroy enemy death particles
- BONUS: Create different goal explosion

```
[SerializeField] float runSpeed;
[SerializeField] float jumpSpeed;
[SerializeField] float climbSpeed;

const string CLIMB_BOOL = "Climb";
const string JUMP_TRIGGER = "Jump";
const string LADDER_TAG = "Ladder";

bool atLadder;
Vector3 screenPos = new Vector3(
SpriteRenderer spriteRenderer;
Animator animator;

void Update ()
{
    MoveHorizontally();
    ClimbLadders();
    ProcessJump();
    SaveTheGame();
}
```

Health For Base

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Decrease Base Health

- Set up collision for base
- Decrease health using **OnTriggerEnter()**

```
[SerializeField] float runSpeed;  
[SerializeField] float jumpSpeed;  
[SerializeField] float climbSpeed;
```

```
const string CLIMB_BOOL = "Climb";  
const string JUMP_TRIGGER = "Jump";  
const string LADDER_TAG = "Ladder";
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(0, 0, 0);  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveHealth();  
}
```

Display Health & Score

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Add Score Text

- Add text UI element
- Add code to keep track of each time an enemy is spawned
- Update the text field each time an enemy is spawned

```
[SerializeField] float runSpeed;  
[SerializeField] float jumpSpeed;  
[SerializeField] float climbSpeed;
```

```
const string CLIMB_BOOL = "Climb";  
const string JUMP_TRIGGER = "Jump";  
const string LADDER_TAG = "Ladder";
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(0, 0, 0);  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheScore();  
}
```

Unity Post Processing Stack

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Post Processing Stack

- Download / import Post Processing Stack
- Add PostProcessingBehavior.cs to camera
- Create profile asset
- Assign profile asset to camera
- Modify

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Add Post Processing Stack

- Set up your Post Processing Stack
- Make your game look different to the default look.
- Please share a screenshot!

```
[SerializeField] float runSpeed;
[SerializeField] float jumpSpeed;
[SerializeField] float climbSpeed;

const string CLIMB_BOOL = "Climb";
const string JUMP_TRIGGER = "Jump";
const string LADDER_TAG = "Ladder";

bool atLadder;
Vector3 screenPos = new Vector3(
SpriteRenderer spriteRenderer;
Animator animator;

void Update ()
{
    MoveHorizontally();
    ClimbLadders();
    ProcessJump();
    SaveTheGame();
}
```

Hook Up SFX

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

SFX Requirements For Your Game

1. What is your game's theme / experience / tone
2. What are all the moments that need SFX
3. Where can you source / create assets

Let's go through that exercise...

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool onLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Implement SFX For...

- Enemy being spawned
- Enemy reaching player's base
- Enemy taking damage
- BONUS: Enemy being killed
(note: solution to bonus will be in following video)

```
[SerializeField] float runSpeed;  
[SerializeField] float jumpSpeed;  
[SerializeField] float climbSpeed;
```

```
const string CLIMB_BOOL = "Climb";  
const string JUMP_TRIGGER = "Jump";  
const string LADDER_TAG = "Ladder";
```

```
bool atLadder;  
Vector3 screenPos = new Vector3(0, 0, 0);  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheGame();  
}
```

PlayClipAtPoint() For SFX

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Solve The Riddle

- Figure out why our death SFX is quiet compared to other SFX.
- Complete the SFX implementation so that the death SFX is same volume as other SFX.
- HINT 1: Use **Debug.Break()** to compare enemy death SFX to enemy hit SFX.
- HINT 2: Where in our scene are 2D sounds heard?

Tune Your Game Moment

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Creating Your Game Moment

- Aim to create an interesting 2 minute moment.
- Find the fun in your game moment by tuning what you have rather than looking to add more features.
- Intention -> Execution.

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 pos = new Vector3(0, 0, 0);  
SpriteRenderer spriteRenderer;
```

```
void Update()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Design Levers Available

- Enemy HPs
- Enemy speed
- Enemy spawn rate
- Tower shot distance
- Tower rate of fire
- Number of towers
- Size of level
- Path through level
- Player health
- Lighting / visibility
- Camera position
- Camera angle
- Size of enemies
- Size of towers
- Art assets
- Particle assets

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
Update()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Tune And Share

- Tune your game to find your moment.
- Share your game with others and see what they like and want more of.
- Give people a very specific challenge (eg. last 2 mintues, or beat XYZ score).
- Share a video of your final product with our community.

Section 5 Wrap Up

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

END OF SLIDES

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Assertions For Error Checking

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

What are assertions?

An assertion in Unity is a condition check that can log an error to the console, continuing execution.

This can be left out in the final game builds, but included in development builds.

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Why use assertions

Assertions can be handy to check that your game is setup properly.

In our case we will use them to easily identify overlapping blocks, which could confuse the pathfinder.

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

Write your first assert statement

- Overlapping blocks should create a console error
- This should happen when you first play the game
- You should easily be able to identify the block

Why not share a screenshot to celebrate your first assert, and let us know your thoughts?

FUTURE SECTION IDEAS

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climbing"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"
```

```
atLadder;  
Vector3 startPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

How To Encapsulate Well

- Objects work on their own member variables
- Ideally no public member variables
- A few public functions to communicate
- A sprinkling of private “helper” functions
- This minimises the number of reasons to change
- In games keep your objects as “real” as poss.

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed  
  
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_TAG = "Ladder"  
  
bool atLadder;  
Vector3 screenPos = new Vector3();  
SpriteRenderer spriteRenderer;  
Animator animator;  
  
void Update ()  
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```

“Code can be copied once, but that when the same code is used three times, it should be extracted into a new procedure”

[https://en.wikipedia.org/wiki/Rule_of_three_\(computer_programming\)](https://en.wikipedia.org/wiki/Rule_of_three_(computer_programming))

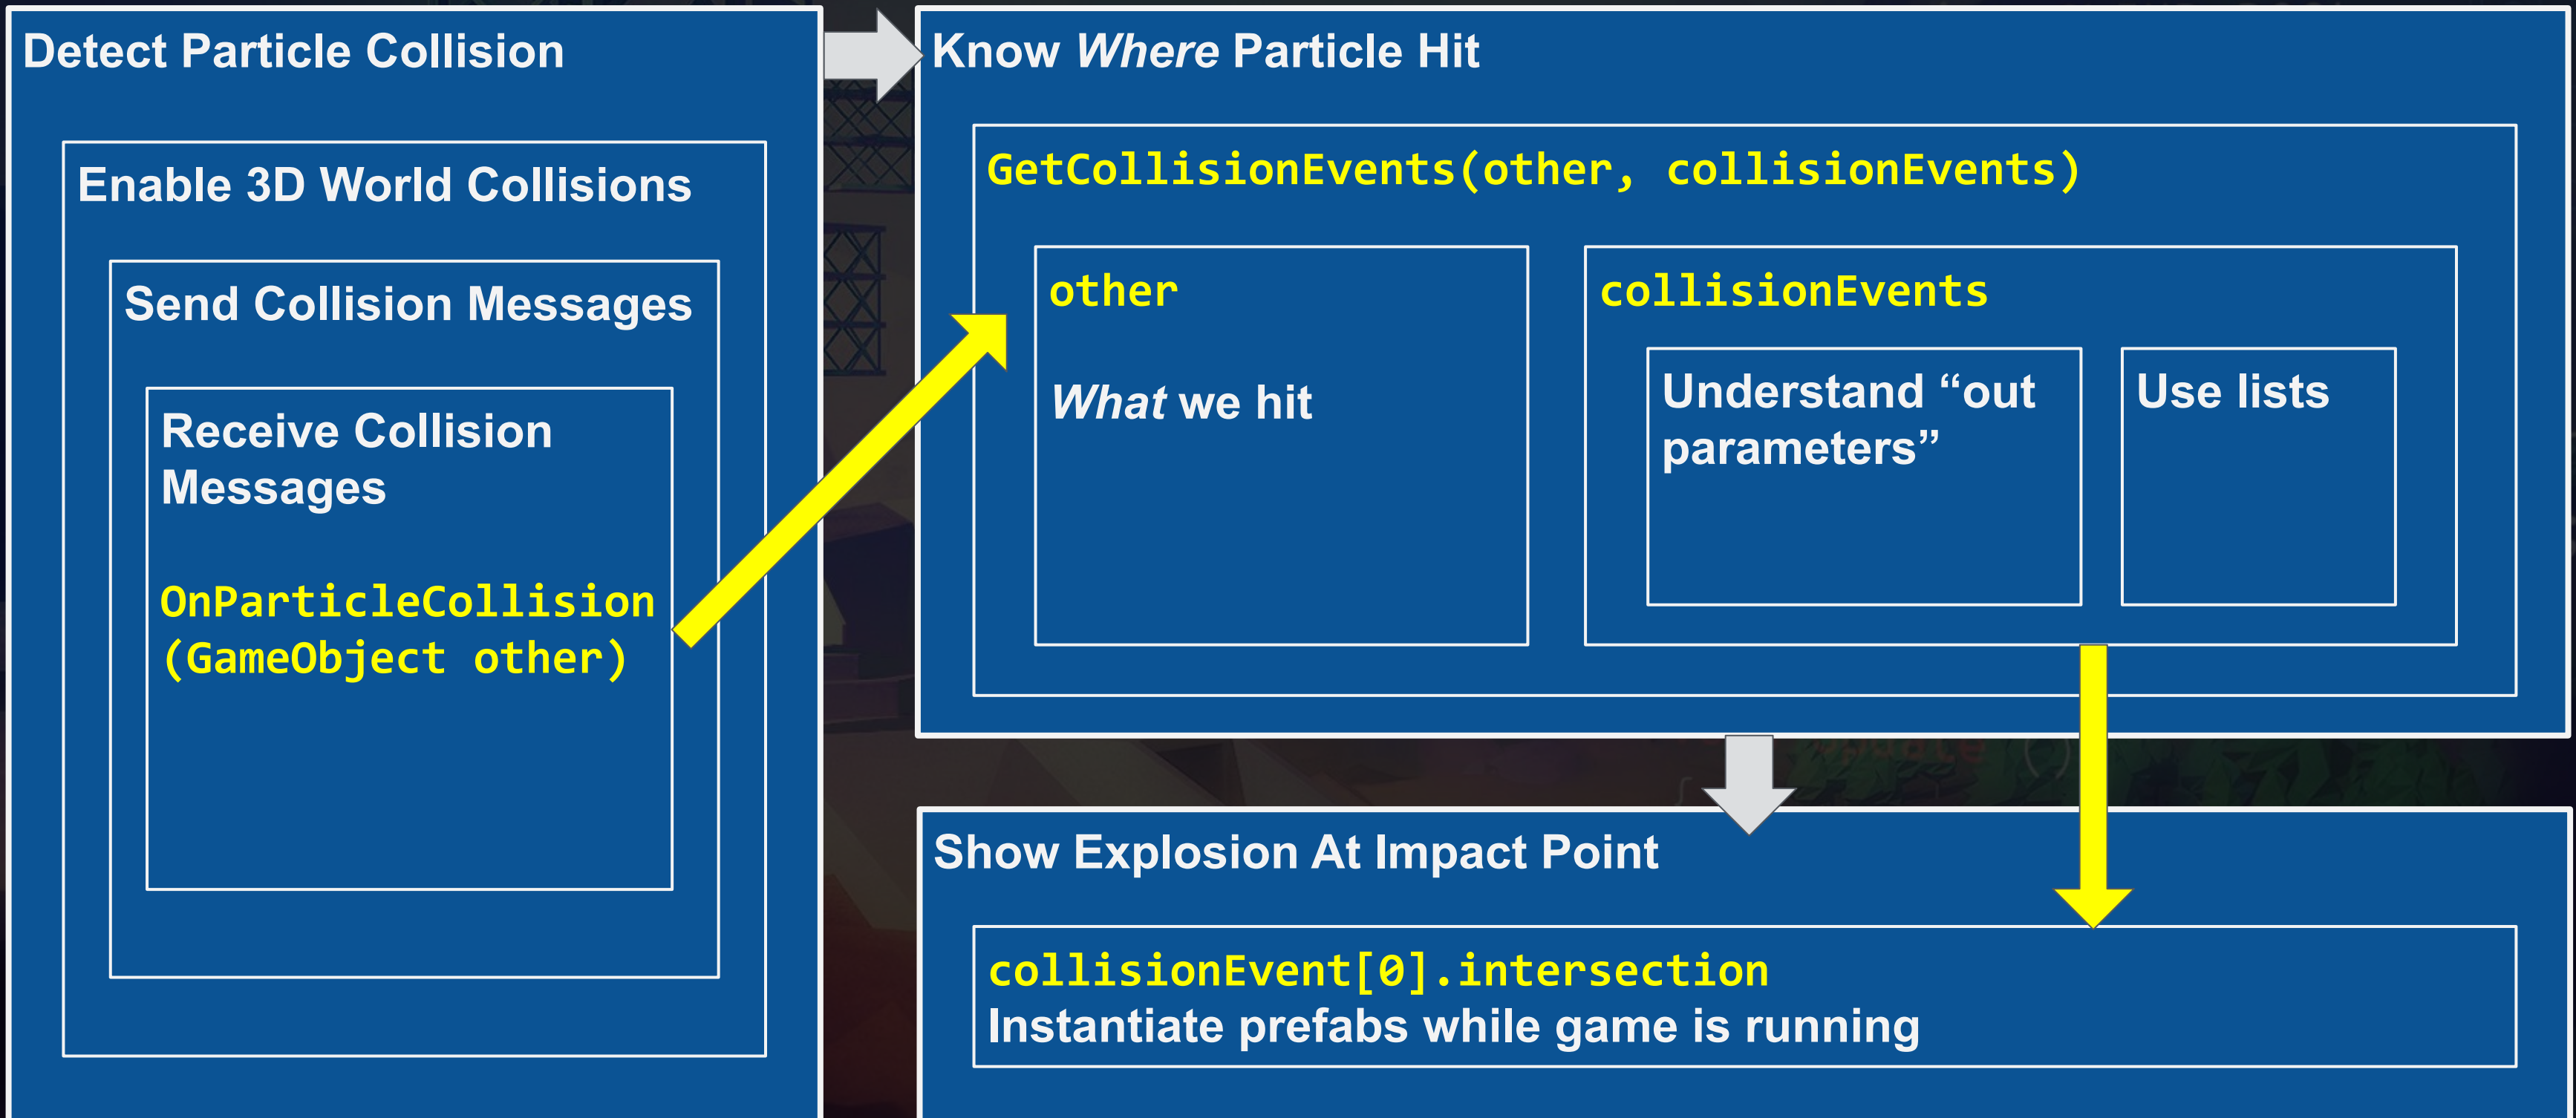

```
[SerializeField] float runSpeed =  
[SerializeField] float jumpSpeed =  
[SerializeField] float climbSpeed
```

```
const string CLIMB_BOOL = "Climb"  
const string JUMP_TRIGGER = "Jump"  
const string LADDER_BOOL = "Ladder"
```

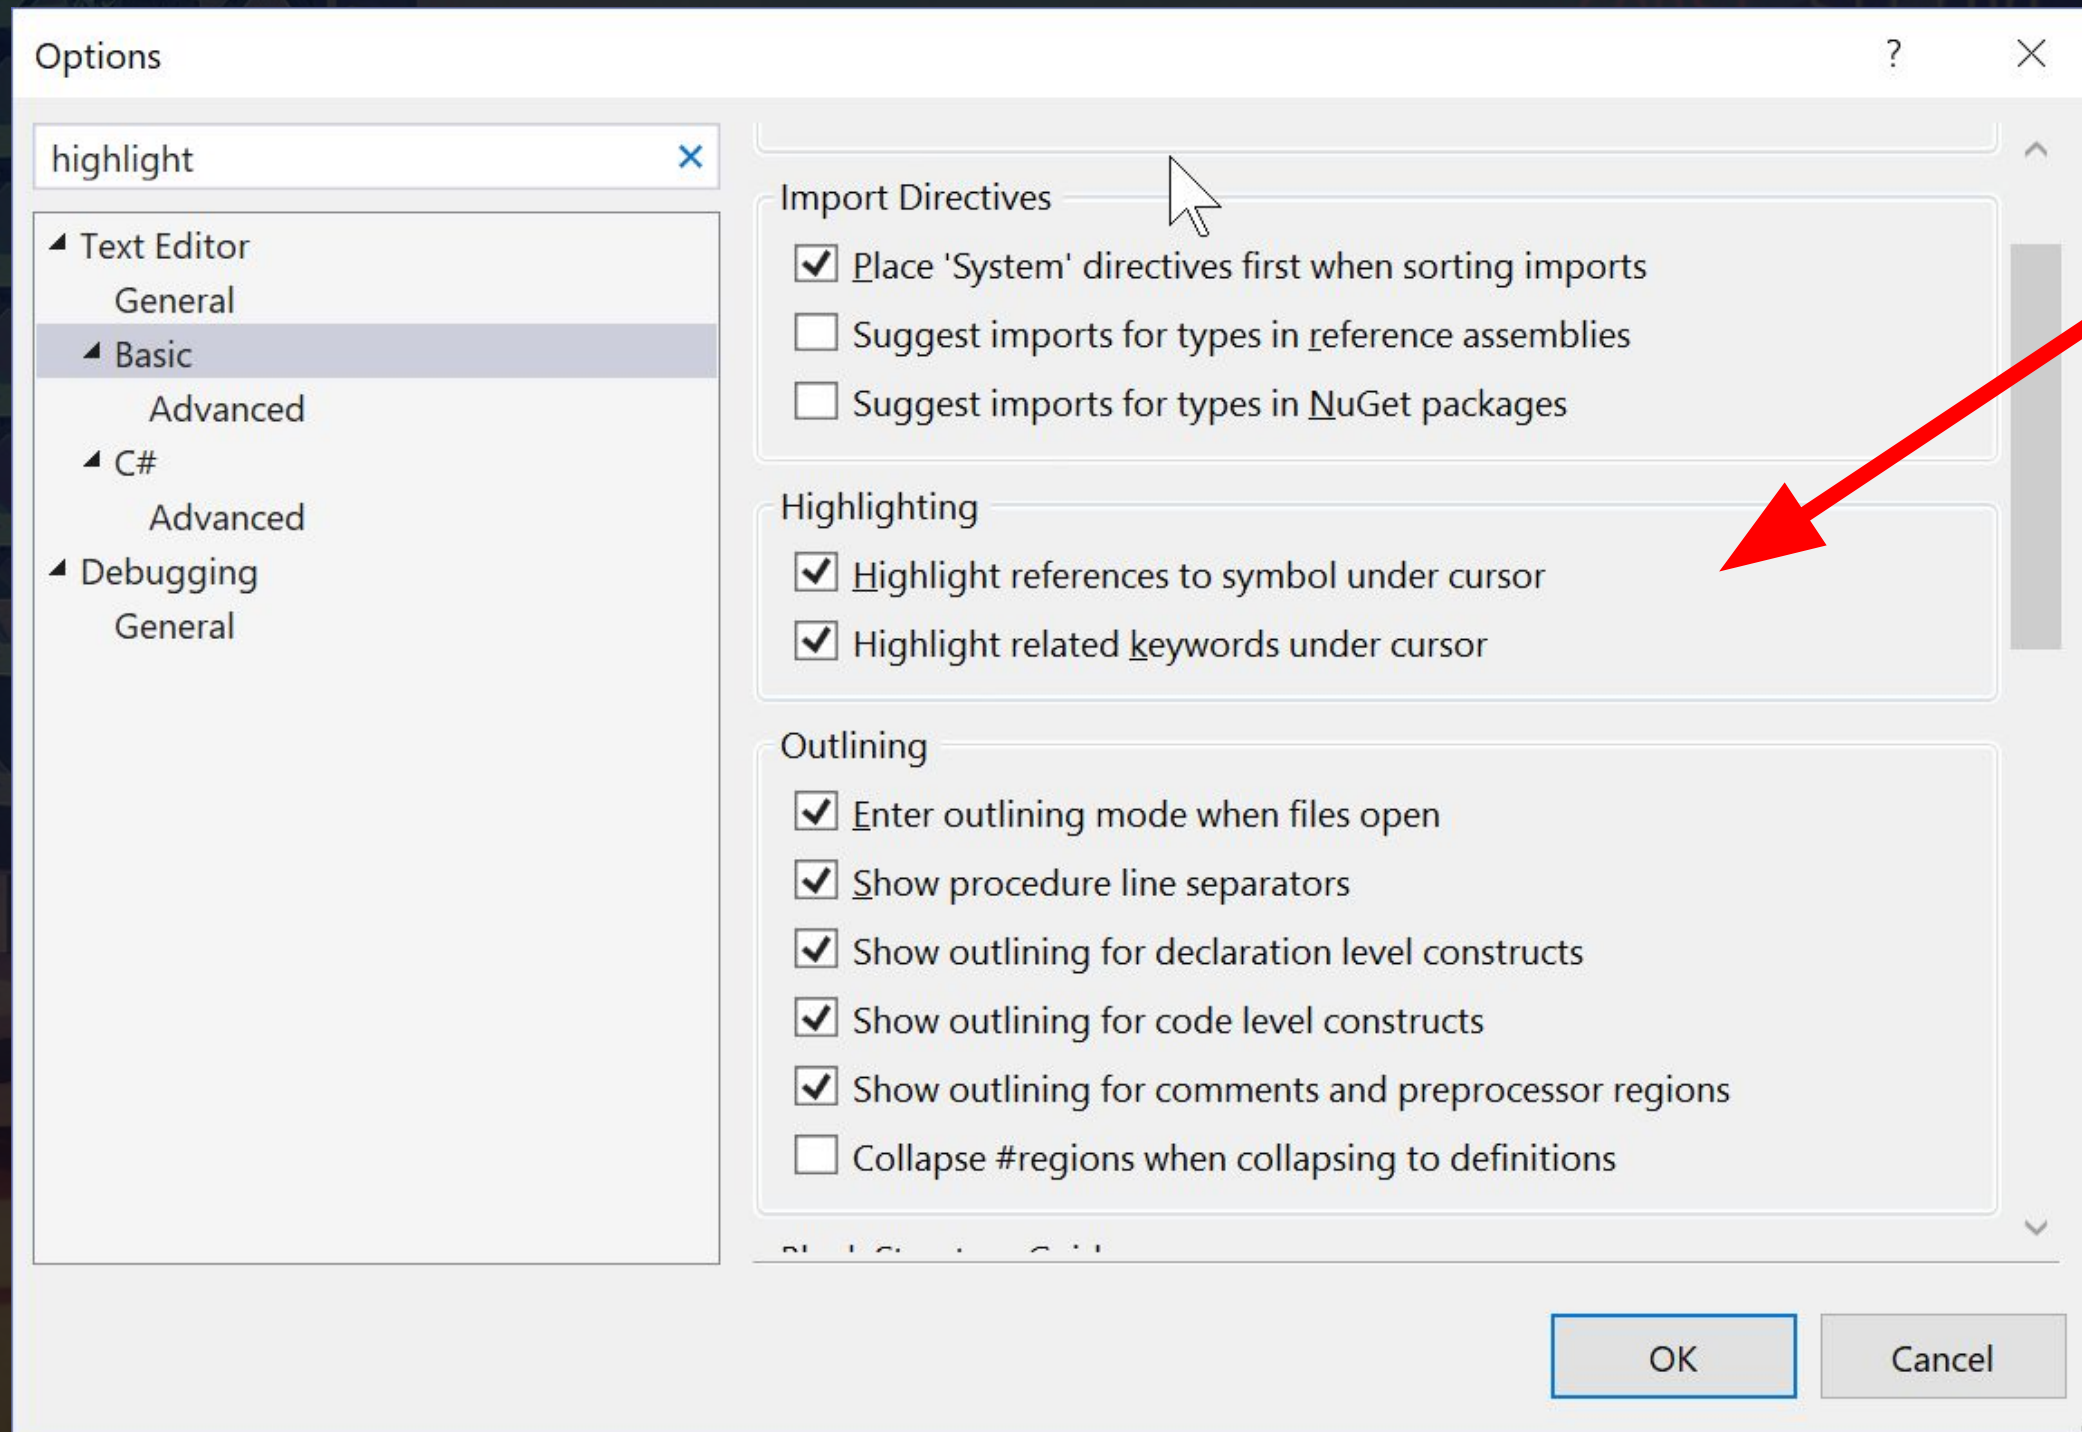

```
Vector3 screenPos = new Vector3()  
SpriteRenderer spriteRenderer;  
Animator animator;
```

```
{  
    MoveHorizontally();  
    ClimbLadders();  
    ProcessJump();  
    SaveTheWorld();  
}
```
